2022 WINTER MEMBER
NEWSLETTER

FROM THE PRESIDENT

Reflecting on Your Support, Planning for Our Future

In my first official president’s message for the CAP Foundation newsletter, I find myself returning to the wonderful time we all had at the CAP22 annual meeting in New Orleans this past October. I’ve been reliving the one-of-a-kind “Password Pathology” event through photos and videos that we’ll be sure to share.

Thank you to everyone—both familiar faces and new—who could join us. It truly was a great opportunity to come together on behalf of the specialty to celebrate our accomplishments while supporting patient care and laboratory medicine.

As we approach the end of another year, we all tend to take stock of what we’ve accomplished while looking ahead to our future goals and aspirations. At the CAP Foundation, we’ve been able to accomplish a great deal in 2022, and I’d like to thank Carey Z. August, MD, FCAP, for her leadership and vision over the past two years during her service as the president of the CAP Foundation.

I’d also like to recognize Maya Ogden who started as executive director of the CAP Foundation in May 2022. She has been instrumental in continuing our work and welcoming me as president and my colleague Bharati S. Jhaveri, MD, FCAP, as vice president.

In 2022, we continued the momentum of our historic fundraising year to build our existing programs like the Global Pathology Education Award while creating entirely new ones like the

Scientific Education and Research Fund and Forensic Pathology Training Grant.

On behalf of the Foundation, I want to express our gratitude to those who made our work possible over the past year. Thank you to the CAP Foundation’s many donors and the hundreds of See, Test & Treat volunteers who donate their time and expertise year after year to help people in their community.

In this issue of the newsletter, we also highlight one of our corporate partners, Genentech, its work in supporting community care, and how we work together to improve health equity. Thank you to all our corporate donors who made a pledge to the Empowering Our Future fundraising campaign, or support the Foundation through See, Test & Treat and other programs.

If you missed Giving Tuesday but still wish to show your support, the CAP Foundation will gladly accept your donations throughout the year. To learn more visit foundation.cap.org/ways-to-donate. Your generosity helps ensure our programs will make an impact now and in the future.

In 2023, we will be able to truly see the impact of these new programs as pathology residents and early-career pathologists learn and grow through these new opportunities.

The CAP Foundation has made expanding our reach globally a priority and you can expect more of that in the future. We will continue to leverage the

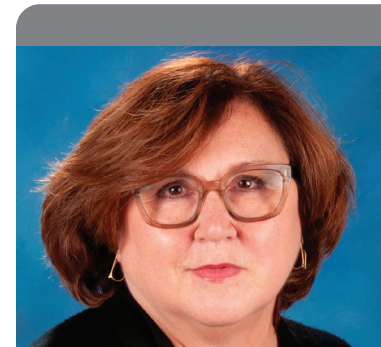

new Global Pathology Award, which provides funding for international projects that develop, expand, and sustain the delivery of pathology services through education and training, patient care, laboratory quality, or enhanced technology and laboratory diagnostics.

Through the Drs. Bharati and Suketu Jhaveri Scientific Education and Research Fund, the CAP Foundation will also more directly support specific research projects that have a measurable and lasting impact on patient care.

These are just a few of the programs that we’ve started and am excited to continue developing alongside the many supporters, partners, and volunteers with the CAP Foundation. I’m looking forward to my next two years with the CAP Foundation, and hope you’ll join me however you can.

Sincerely,

Eva M. Wojcik, MD, FCAP
President, CAP Foundation

Genentech Supports CAP Foundation, Pathologists, and Health Equity

Lisa McClintock, Greg Schexnailder, and Judy Largen of Genentech with Jimmie Wells, University of Mississippi Medical Center, coordinator of See Test Treat, as she prepares for their event in March 2022.

In 2016, leaders at Genentech, a member of the Roche group, recognized a potential partnership with the CAP Foundation in promoting and advancing pathology and laboratory medicine.

The two organizations started by co-hosting webinars and then a roundtable discussion in 2020 to explore the role of pathologists in patient care and how they could work to further improve quality and accuracy in diagnosing disease.

In 2021, partners at Genentech wanted to get more involved in directly supporting the CAP Foundation's programs and saw an opportunity in the Empowering Our Future fundraising campaign, which has now raised over \$2.3 million with the help of corporate donors like Genentech who pledged over \$200,000 in support.

"The current initiative from the CAP Foundation represents key areas that our team is passionate about: pathology training, education, and research," said Judy Largen biomarker testing account executive with Genentech. "We are also aligned with the objectives of the CAP Foundation's

See, Test & Treat initiative."

There are clear parallels among the teams at Genentech as they work developing treatments for serious disease and the pathologist members of the CAP who diagnose disease and help inform treatment decisions. In particular, Genentech's biomarker testing team works diligently to provide educational resources about diagnostic tools for pathologists, according to Largen.

She continued, "Pathologists' leadership of multidisciplinary teams increases collaboration with clinical colleagues and results in better patient care. Given how we are aligned on the importance of pathologists in the delivery of health care, we continue to look for opportunities to appropriately support the CAP Foundation."

"With partner hospitals and clinics across the US, we also directly eliminate barriers to care with the See, Test & Treat program."

Genentech provides charitable giving to nonprofit partners who reduce barriers to participation in clinical research and supports careers in science and medicine for historically underrepresented communities.

The CAP Foundation's support of pathologists in medically under-resourced areas of the world through the Global Pathology Education Award and Global Pathology Award aligns with the work of Genentech, said Largen. The Leadership Development Award and Medical Student Award also provide a diverse group of medical students and residents with

unparalleled learning opportunities.

Outside of the organization's direct ties to pathology, Genentech aligns with the CAP Foundation in its commitment to health equity and community service.

"The CAP Foundation helps elevate the voices of pathologists in the fight for health equity and has opened access to pathology education to underserved and under-resourced areas," said Maya Ogden, executive director of the CAP Foundation.

"With partner hospitals and clinics across the US, we also directly eliminate barriers to care with the See, Test & Treat program," Ogden continued.

The CAP Foundation's See, Test & Treat program partners with hospitals and clinics to provide pathologist-led, free cervical cancer and breast cancer screening events in medically underserved communities.

Largen said Genentech shares the CAP Foundation's mission to expand health equity in medically underserved communities. "We're focused on advancing the inclusion of under-represented groups in research and development programs to enrich scientific insights," Largen said. "We also focus on supporting initiatives that increase access to quality clinical care for diverse patient populations."

In 2022, the CAP Foundation has distributed 74 grants and awards to support pathologists and laboratory medicine and served hundreds of patients through 13 See, Test & Treat programs across the US.

CAP Foundation Celebrates Support at CAP22

A special thank you to Eli Lilly for their continued support of the CAP Foundation and for sponsoring the "Password Pathology" event at the CAP22 annual meeting in New Orleans.

Extend Your Impact with a Planned Gift

Planned gifts provide the CAP Foundation with the long-term means to ensure the viability and sustainability of programs that impact countless pathologists and their patients into the future.

A gift in your estate plan is an easy and affordable way to support the mission of the CAP Foundation by making an extraordinary gift to enrich your legacy.

The CAP Foundation is creating a Legacy Society dedicated to

sustaining the mission of the Foundation and its programs. We hope you will consider becoming a member of this special group by making a planned gift. If you are interested in learning more or helping to shape this important effort, please contact Maya Ogden, executive director of the CAP Foundation, at mogden@cap.org or 847-832-7391.
